

Storm water management - what progress have we made a Q&A debate

Panel:

Dr Geoff O'Loughlin, Anstad Pty Ltd

Dr Peter Coombes, Bonacci Water Pty Ltd

Dr Brett Phillips, Cardno

Abstract:

A big leap was made in the way we manage storm water 15 years ago when industry and the public embraced a more holistic view. Storm water systems were no longer seen as just a way of conveying urban runoff in a way that minimized inconvenience for the public. The focus on storm water systems started to include water quality, softer more environmental systems, repairing the ecologically of systems that had been neglected and more recently using storm water as a resource. This seminar's participants were at the forefront of these changes and bring their combined industry experience to look back on the progress we have made.

Tuesday April 19th 2010

Time: 5:30pm for 6:00pm

Drinks & nibblies from 5:30pm.

Venue: Engineers Australia Auditorium, Ground Floor
8 Thomas St, Chatswood NSW 2067

See attached maps and follow signage on the day
